

test 2

Subject: Biology | Chapter: reproductive health | Difficulty: medium

Question 1: Which of the following contraceptive methods is most effective in preventing both pregnancy and sexually transmitted infections (STIs)?

Options:

- A) Oral contraceptive pills
- B) Condoms
- C) Intrauterine device (IUD)
- D) Diaphragm

Question 2: During oogenesis, what is the final result of meiosis I?

Options:

- A) Four haploid ovum
- B) Two diploid secondary oocytes
- C) One haploid secondary oocyte and one polar body
- D) Two haploid ovum and two polar bodies

Question 3: The process of fertilization typically occurs in which part of the female reproductive system?

Options:

- A) Uterus
- B) Cervix
- C) Fallopian tube
- D) Vagina

Question 4: Which hormone is primarily responsible for the development and maintenance of the corpus luteum?

Options:

- A) FSH
- B) LH
- C) Estrogen
- D) Progesterone

Question 5: What is the role of the acrosome in sperm?

Options:

- A) Provides energy for sperm motility
- B) Contains enzymes for penetrating the egg
- C) Carries the genetic material
- D) Supports the sperm's tail

Question 6: Infertility can result from various factors. Which of the following is NOT a common cause of male infertility?

Options:

- A) Low sperm count
- B) Blocked fallopian tubes
- C) Erectile dysfunction
- D) Hormonal imbalances

Question 7: A study is designed to test the effectiveness of a new contraceptive pill. Which of the following is the most appropriate control group?

Options:

- A) Group receiving a placebo pill
- B) Group receiving no treatment
- C) Group receiving a different contraceptive pill
- D) Group receiving a hormone replacement therapy

Question 8: Identify the structure labeled 'X' in the provided diagram of the female reproductive system. [Insert image of female reproductive system with 'X' labeling an ovary]

Options:

- A) Uterus
- B) Fallopian tube
- C) Ovary
- D) Vagina

Question 9: Which part of the male reproductive system is responsible for the production of sperm?

Options:

- A) Prostate gland
- B) Vas deferens
- C) Testes
- D) Epididymis

Question 10: In a hypothetical ecosystem, a decrease in the population of pollinators (like bees) would directly impact which aspect of human reproductive health?

Options:

- A) Increased STIs
- B) Decreased access to contraceptives
- C) Reduced availability of certain foods rich in essential nutrients
- D) Higher rates of infertility
